SHIFT FOR THE NEXT

Corporate Philosophy

By establishing as our corporate philosophy the company policy on which we were founded, the guiding factors for the direction in which JOT Group should head, and the JOT Group Mission, which signifies our preparedness—and through the sincere application of this corporate philosophy by every single employee— JOT Group continually strives to be a business group that is needed by and develops alongside society.

Company Policy

Service is My Business

JOT Group Mission

We at JOT Group take pride in our company and our work, fulfilling our five-part mission and contributing to the development of society.

01 Safety

We will devote ourselves to putting the Safety First mantra at the center of our work. 02

Fairness

We will conduct fair business operations with a law-abiding spirit and a sense of social responsibility. 03 Trust

We will provide top-class products and transport services to win the trust of our customers. 04

Self-Challenge

We will pioneer new products in new fields with a self-challenging attitude as we work toward community and company growth.

05 Harmony

We will strive to protect our natural environment and exist in harmony with the public through activities that contribute to society.

Editorial Policy

The JOT Report presents comprehensive information on the various businesses, results, and financial standing of the Japan Oil Transportation (JOT) Group.

By continuing to disclose information with a high degree of transparency, we strive to build mutual understanding and trust with our stakeholders and sustainably enhance corporate value.

Period Covered

In principle, this report covers the period from April 1, 2022 to March 31, 2023, but also includes some content from April 2023 onward.

Entity Covered

Japan Oil Transportation Co., Ltd. and seven Group companies

Date of Issue

October 2023 (next scheduled publication: October 2024)

Disclaimer

This report contains forward-looking statements such as the forecasts and strategies of Japan Oil Transportation Co., Ltd. and its consolidated subsidiaries. These statements reflect judgments made based on currently available information. Please note that results may differ significantly from forecasts due to a variety of factors.

Message from the President

We aim to provide safe, high-quality transportation services to be a corporate Group that is the choice of customers

I would first like to share my gratitude to everyone for your continued patronage of the Japan Oil Transportation (JOT) Group.

JOT was founded in 1946 with the goal of transporting domestic crude oil. As economic and social circumstances have undergone drastic changes, we have developed transport services that unite rail transport and motor transport and allow us to carry cargo that is essential to the industries of our country and to our personal lives—not just petroleum products, but also goods such as liquefied natural gas (LNG), chemical products, perishable foods, and general freight. I am incredibly thankful for the ongoing support all of you have given JOT because it has allowed us to overcome many hardships and realize sustainable growth thus far.

In recent years, based on the diverse needs of our progressively global customers, we started transport services in foreign countries. In addition, we execute medium-to-long-term initiatives for transporting hydrogen, which is attracting attention as a next-generation automotive fuel.

The JOT Group provides high-quality services with safety as its highest priority under the "Shift to the Next" corporate motto: We fulfill our responsibility to the future with thorough safety and high-quality services to live up to the expectations of everyone as a trusted and chosen logistics partner of customers.

I kindly ask for your continued support.

Business Profile

BUSINESSES

Oil Transport Business

This business transports gasoline, kerosene, crude oil, and many other petroleum products using railroad tankers and tanker trucks in addition to managing petroleum product supply and storage base operations.

Railroad Tank Car Transport

Reducing CO₂ Emissions

When considering the transport of cargo, rail transport can be seen to be much better for the environment than other transportation systems. The CO_2 emissions from rail transport are roughly one-tenth that of freight vehicles and about half that of cargo ships.

Although truck transport is an indispensable part of modern-day oil transport, incorporating rail transport effectively can make transportation that takes our environment into account possible.

CO2 emissions by transport volume (freight)

JOT strives to develop and expand the stock of tank cars available for large-volume transport as the industry pursues greater efficiency in the transport of oil due to a lack of commercial drivers. We have been promoting increases in capacity and speed ever since the 35-ton tank railcar was developed jointly with the then-Japanese National Railways in 1966. Aiming for even higher capacity and faster speed, JOT developed the Taki 1000 in 1993 as the first high-speed freight tank car. This innovation enabled a 95 km/h maximum speed using a 45-ton tank car. In 2021, the production

of the Taki 1000 exploded to 1,000 railway cars, which was a milestone celebrated by commemoratively wrapping the 1,000th rail car.

Eco-Rail Mark

When a company or product is certified as actively making an effort to utilize environmentally friendly rail freight transport, the Eco-Rail Mark label is attached to that product or catalog. As an "Eco-Rail Mark Supporting Company" involved with the transport of Eco-Rail Mark certified products and the transport of products for Eco-Rail Mark certified companies, we are helping to popularize the Eco-Rail Mark certification.

To maintain the lifeline for the Tohoku region, which experienced a severe fuel shortage following the 2011 Great East Japan Earthquake, we provided rail transport starting one week after the incident from the Kanto area to Morioka by way of Akita and Aomori. We also operated temporary oil trains as far as Koriyama by way of Niigata. At the same time, we conducted aid transport via tanker

trucks from the Niigata and Akita regions toward the Pacific coast of the Tohoku area.

Oil Transport Business

Tanker Truck Transport

Oil Tanker Truck Transport Prioritizing Safety

JOT started motor transport immediately after its founding in 1948. Our fuel oil transport always prioritizes safety to execute operations as "the face of our customers" while driving on public roads. Not only do we install safety equipment on the vehicles we use, but we also carry out thorough maintenance on vehicles within the JOT Group and conduct model driver training in areas such as driving etiquette as well as life-saving knowl-

edge that will allow our drivers to take the initiative in rescue operations in case of an accident.

Business Profile

BUSINESSES

High Pressure Gas Transport Business

This business transports a wide variety of high-pressure gases, such as Liquefied Natural Gas (LNG), Liquefied Petroleum Gas (LPG), hydrogen, liquefied oxygen, liquefied nitrogen, and liquefied ammonia.

LNG Transport Business

This business is in charge of transporting private, commercial, and industrial Liquefied Natural Gas (LNG) through its own fleet of over 300 LNG tanker trucks throughout Japan. We hold the top share in LNG transport, which makes up roughly 40% of the transport volume in Japan. JOT not only provides transport by tanker truck but also can propose intermodal transport services utilizing its expertise in railway car transport. We offer intermodal solutions suitable to the needs of each customer.

LNG Supply Scheme

In recent years, driven by efforts to realize a carbon-free society, the demand for LNG for use by both consumers and industry has increased rapidly due to its highly stable price and the relatively low levels of CO₂ emissions it produces when burned, compared with oil or coal. After commencing with the transport of LNG via tanker trucks in 1984, JOT Group implemented the country's first tanker container rail transport system for the product in 2000. We are able to provide intermodal transport utilizing our vast experience amassed over many years and the advantages of railroads and automobiles. Moreover, in times of emergency such as those following a disaster, we meet the needs of our customers by offering multiple modes of transportation.

Flow of LNG Railway Car Transportation

Flow of LNG Tanker Truck Transport

Initiatives to Safely Transport LNG

N0.337

All people involved with the transport of LNG receive individual, thorough safety education and training that allows them to always transport the products safely.

The LNG Training Center is part of the JOT Group's Ibaraki Sales Office of ENEX, INC. The center's classroom and practical skill training begins by offering a basic understanding of LNG before conducting regular safety education for all transport and officer staff involved in LNG transport operations, which establishes an all-around safety system.

Education and training are done according to the level and number of years of experience of each individual. By repeatedly providing this education and training, we strive to deliver safe transport on a daily basis.

Business Profile

Financial Information

High Pressure Gas Transport Business

Hydrogen and Other High-Pressure Gases

Hydrogen Transport

The JOT Group is involved in the trailer truck transport of compressed hydrogen and the operation of mobile hydrogen stations as a way to facilitate greater energy efficiency and the use of hydrogen as a green energy with zero CO₂ emissions when burned.

As efforts continue to ramp up quickly toward a carbon-free society, JOT will play a leading role in the transport of new energies by capitalizing on our expertise backed by proven results in the transport of a variety of high-pressure gases.

Transportation Scheme

Flow for Transporting Compressed Hydrogen via Trailer Trucks

In the Kanto, Chubu, and Kyushu regions, we handle the distribution of hydrogen to stationary hydrogen stations, which is contributing to widespread infrastructure offering broader access to hydrogen.

Transportation and Sales Flow of Mobile Hydrogen Stations

In the Kanto region, we not only handle the distribution of hydrogen to mobile hydrogen stations but also engage in sales efforts targeting local customers, which is contributing to more widespread use of Fuel-Cell Vehicles (FCV).

Other High-Pressure Gas Transport

The JOT Group handles the transport of many different high-pressure gases besides LNG and hydrogen, such as Liquefied Petroleum Gas (LPG), liquefied oxygen, liquefied nitrogen, and liquefied ammonia. These high-pressure gases support a variety of industries, whether iron and steel, automobiles, or even food and medicine.

Business Profile

BUSINESSES

Chemical Transport Business

This business provides leasing as well as intermodal shipping services for various ISO tank and other containers for transporting various liquid and powder chemicals, foods and other products. The intermodal shipping service expands our transport services from Japan to 11 other Asian nations.

Domestic Chemical Transport Business

This business capitalizes on knowledge accumulated over more than half a century to execute various tank container rental (leasing) services to transport substances in liquid/powdered form, such as various chemical and food products. We are also developing total contract services handling everything from building transport schemes to arranging orders and processing transport payments.

A Wide Variety of Containers for Chemical Products

To meet the broad transportation needs of today, we own over 7,000 containers with a number of different characteristics. We have put together a prompt delivery system for our ISO tank containers by maintaining accurate inventory control. Our order-made containers are fabricated newly just for you to handle cargo with unique characteristics in addition to containers for beaded substances. IBC's (medium-sized tank containers with a capacity of 1,000L) and various other options.

Safety is Our Top Priority

Safety specifications JOT's ISO tank containers are designed with maximum priority on safety and are standard equipped with protective corrugated sheets and walk boards around the entire perimeter.

Walk boards

Baffle plate

Maintenance

We also offer maintenance services such as cleaning and repair through collaboration with other companies across the country.

Maintenance Locations

Tokyo, Kawasaki, Chiba, Kashima, Nagoya, Kobe, Tokuyama, Kitakyushu

Domestic Transport Services

We take care of everything—from setting up transport

systems with the optimal combination of railroads,

automobiles, and ships all the way through making

the arrangements for daily orders and squaring up

accounts. JOT Group is proud to offer this "one-stop service" built on our nationwide distribution network and a wealth of experience cultivated over many years.

Commitment of Top Management

Business Profile

Financial Information

Chemical Transport Business

International Chemical Transport Business

JOT Network Area map

We achieve smooth transportation by way of our network of on-site distributors and depots in ten different Asian countries in addition to branches throughout Japan and Singapore.

Transportation Flow

Our ISO containers are compatible with a variety of transportation methods by railway cars, trucks, and even ships. We provide door-to-door transportation in line with customer needs.

Transportation Quality

We have put in place cleaning and preparation bases in eleven countries in a comprehensive

system to provide quality transportation. Moreover, third-party agencies that guarantee the quality of cleaning inside of tanks after transport always issue cleaning certificates.

Safety Specifications

The top of containers are equipped with running boards to ensure cargo is loaded and unloaded safely. These running boards come in two types: single side E-shaped running boards and all-round running boards.

ISO Tank Containers

JOT has prepared 2,000 ISO tank containers (with a capacity of 25,000L) to immediately address any transportation needs. We have put together a prompt delivery system within our network area by maintaining accurate inventory control.

Our ISO tank containers for domestic transport also

satisfy the standards for international transport. We also provide new order-made containers fabricated based on the characteristics of the cargo.

ЮТ

Business Profile

Container Transport Business

This business provides leasing services that include refrigerated containers that facilitate rolling stock and truck transport of perishable goods and other items requiring temperature control.

Framework for Transporting Containers by Rail

Freight forwarding companies become the contact point for customers (shippers) in the rail freight transport system to pick up (collect) and deliver freight using trucks hauling containers for rail freight transport to the closest freight terminal. Japan Freight Railway Company (JR Freight) transports the containers loaded onto freight trains to a freight terminal closest to the destination. Upon arrival, the freight forwarding companies deliver the containers loaded back onto trucks to their destination.

Benefits of Rail Freight Transport

Highly efficient, low-cost transport of a large volume of freight

Rail freight transport enables large-volume transport with a minimal staff, which can offer larger transport cost reductions over longer distances in addition to helping alleviate concerns about the lack of long-distance truck drivers.

Contribution to reduction of environmental impact

Rail freight transport produces about one-tenth of the CO_2 emissions than that of trucks and about half that of coastal cargo ships, which makes it an eco-friendlier means of transport than the various other transportation methods.

Containers to Meet a Wide Variety of Demands

Among rail transportation containers, we offer refrigerated containers ideal for both temperature-controlled freight and general freight. We also offer both rental and leasing systems for containers.

Refrigerated containers

These containers take advantage of insulation materials for cold/heat performance as an ideal means to transport produce and other items requiring temperature control.

Reinforced refrigerated containers

These containers take advantage of a vacuum insulation panel for higher thermal insulation than refrigerated containers as an ideal means to transport items requiring even stricter temperature control.

Dry containers

These containers for the transport of delivery packages and other general freight have a capacity equivalent to that of a 10-ton truck.

Rental system

Provides each freight forwarding company with various container options made available at freight terminals based on demand according to customer freight transport orders (companies return the containers at a freight terminal closest to the destination after delivery).

Leasing system

Provides shippers and freight forwarding companies a way to freely use specialized containers (various wrapping is also available) throughout the term of a lease.

Business Profile

BUSINESSES

Asset Management Business

This business operates the property rental business to actively capitalize on former office and business lots as well as other properties it owns in addition to four solar power generation stations throughout Japan.

Property Rental Business

JOT operates the property rental business to actively capitalize on former office and business lots and other properties it owns.

Property rentals cover a wide genre of applications from offices, shops, apartments and condominiums to parking lots and motorcycle garages.

We aim to take this business to the next level in the future while properly and effectively utilizing management resources.

Solar Power Generation Business

The JOT Group has been responsible for part of the domestic energy supply that supports the industries of Japan as well as the daily lives of its citizens by transporting petroleum products and high-pressure gases such as LNG.

In 2013, we entered the solar power generation business as one eco-friendly renewable energy to effectively use properties that JOT owns. Today, we operate four solar power stations around Japan.

JOT will contribute to the development of a sustainable society as a corporate conglomerate with a social duty to supply the energy essential to economic systems.

Financial Review

Results

In fiscal 2023, social and economic activities continued to return to normal in Japan despite the lingering impact of COVID-19, but the economic outlook remained uncertain amid the prolonged Russia-Ukraine conflict and the impact of sudden fluctuations in foreign exchange rates. In terms of the Group's business environment, transport demand has gradually recovered, but soaring energy and raw-material prices continue to pose challenges. In these conditions, to achieve our medium-term management plan (fiscal 2022-fiscal 2024), while working to prevent COVID-19 infections, the Group sought to maintain safe, stable transport services, secure earnings and boost productivity in our mainstay businesses, enhance profitability in the overseas transport business, and capture transport demand relating to a carbon neutral society. As a result, net sales for the year were 35,128 million yen (up 2.5% year on year), operating income was 1,511 million yen (up 3.6%), ordinary income was 1,794 million yen (up 10.1%), and profit attributable to owners of parent was 1,227 million yen (up 12.8%).

Financial Position

Total assets at the end of fiscal 2023 were 36,803 million yen, an increase of 1,154 million yen from the end of fiscal 2022. Current assets were 11,131 million yen, an increase of 1,702 million yen. This was mainly due to an increase in cash and deposits. Property, plant and equipment decreased by 548 million yen from the end of fiscal 2022 to 25,672 million yen, due mainly to progress in depreciation of machinery, equipment and vehicles, and leased assets. Liabilities were 14,214 million yen, down 29 million yen from the end of fiscal 2022. Although income taxes payable and retirement benefit liabilities increased, notes and accounts payable-trade were down, while we made progress in drawing down lease obligations. Net assets were 22,589 million yen, an increase of 1,183 million yen from the end of fiscal 2022. This reflected an increase in retained earnings due to the recording of profit attributable to owners of parent, as well as an increase in the valuation difference on available-for-sale securities. As a result, the equity ratio rose 1.4 points from the end of fiscal 2022 to 61.4%.

Cash Flow

• Cash flows from operating activities

Net cash provided by operating activities was 4,674 million yen (4,668 million yen in fiscal 2022). This was mainly due to profit before income taxes of 1,830 million yen, depreciation of 3,685 million yen, and income taxes paid of 524 million yen.

• Cash flows from investing activities

Net cash used in investing activities amounted to 1,009 million yen (2,252 million yen used in fiscal 2022). This was mainly due to 1,094 million yen spent on the acquisition of machinery and equipment as well as buildings and structures, which offset proceeds from the sale of property, plant and equipment.

• Cash flows from financing activities

Net cash used in financing activities amounted to 2,048 million yen (1,674 million yen used in fiscal 2022). This was mainly due to the repayment of finance lease obligations of 2,026 million yen and cash dividends of 264 million yen, which offset sales and leaseback proceeds of 269 million yen.

Outlook

Looking ahead, we expect economic and social activities to return to normal in Japan, boosting the economy, but harbor concerns about the ongoing impact of the Russia-Ukraine conflict and slowdowns in overseas economies, among other things, which cast uncertainty over the outlook. We also expect continued challenges in the business environment for the Group, stemming from soaring prices caused by factors in Japan and abroad and the resulting slump in transportation demand. The Japanese government will also apply a cap on overtime work for the logistics industry in 2024, which raises concerns about further commercial driver shortages. In fiscal 2023, the second year of our medium-term management plan, profits fell short of forecast amid adverse business conditions. In fiscal 2024. the final year of the plan, we will do our utmost to achieve our targets while continuing to ensure safe, stable transport services based on the policies and action plans for each business outlined in the plan. We will also continue to pursue forward-looking initiatives, including realizing clean logistics and creating new businesses, as well as securing commercial drivers by enhancing employment conditions. At the same time, we will seek to practice ESG management and establish a robust earnings base and stable financial structure, aiming to become Japan's number-one energy transport company.

* We applied the Accounting Standard for Revenue Recognition (ASBJ Statement No. 29) starting in fiscal 2022. Key management indicators and other figures for fiscal 2021 are restated retroactively.

* We changed our method of displaying figures in fiscal 2022. Key management indicators and other figures for fiscal 2021 have been reclassified to reflect the changes.

* We carried out a 10-for-1 stock consolidation with October 1, 2016 as the effective date. Annual dividends for fiscal 2017 reflect the sum of an interim dividend of 4.0 yen and a year-end dividend of 40.0 yen.
